About Us

Angstrom Technology was founded in 1989 to provide the nation's premier cleanroom solutions. From the start, our mission was to be the industry leading experts on cleanroom design, build, and service. We have never wavered from this mission.

We employ a knowledgeable and friendly staff who takes great pride in the products and services we provide to our customers. Our employees are Angstrom's greatest attribute, and the quality of our people and their work is unsurpassed in the industry. Angstrom Technology is a national company with a corporate office located in Michigan, and sales offices throughout the United States.

Our modular cleanrooms are designed to meet your ISO classification requirements.

Class	100000	ISO 8
Class	10000	ISO 7
Class	1000	ISO 6
Class	100	ISO 5
Class	10	ISO 4

What We Do

We are experts in modular cleanroom design, installation, and service. We specialize in cleanrooms ranging from ISO 8 (Class 100,000) to ISO 4 (Class 10). We service a wide variety of industries, including compounding pharmacies (USP 797/USP 800 & 503B), medical device manufacturing, aerospace, optical assembly, semiconductor, wafer fab, and industrial manufacturing, just to name a few. Our expertise in cleanroom design allows us to address the most complex customer requirements, and our experienced construction team works with our customers to make those designs become a reality.

How We Do It

Angstrom Technology prides itself on our creativity and flexibility with the cleanrooms we offer. We understand that no two cleanrooms are exactly the same, and we draw on our years of experience to design a custom cleanroom to fit the specific needs of our customers. In doing so, we follow a four phase customer engagement process.

**Angstrom
Technology
Four Phase
Customer
Engagement
Process.**

Introduction and Planning Process –

We take the time to discuss your specific needs, and to understand the unique requirements at hand on your project. It is in this phase that we gain a comprehensive understanding of what your business processes and objectives are, and how we can design the best possible cleanroom for you while keeping your budget in mind.

Design Process –

Our experienced design engineers create a cleanroom based on input from our sales and field operations teams. Starting from initial concept sketches, we work closely with our customers to develop a final product that is specific to their needs, but that will more importantly meet and exceed their expectations.

Construction and Certification Process –

Prior to each project, our field services team conducts a site visit. Here we look for possible challenges that could impact the project timeline or bottom line. This site visit allows us to prepare adequately for the task at hand as well as mitigate potential pitfalls. Our construction team consists of Project Manager, Engineer, Field Operation Supervisor and Installation Crew. Our teams oversee each cleanroom from design to owner acceptance. Customers will experience exceptional communication with direct access at any time to anybody on staff (both on and off site), and regularly scheduled project meetings. Our process is closely managed to maintain or accelerate schedule, quality, and safety. Angstrom Technology does not certify its own cleanrooms due to the potential conflict of interest. We do, however, have third party certifiers that we're happy to recommend to you if needed. Though we don't physically certify our cleanrooms, we do warrant that all of the rooms we build will certify at the ISO classification specified up front.

Training and Service Process –

We provide employee training on how to best care for and maintain your cleanroom. We educate customers on how to reduce overall cost of maintenance and continuation of your certification.

Technology will help
achieve your desired
cleanroom results.***

What our customers say about us

Our people are amazing

At Angstrom Technology, our people are our single greatest strength and competitive advantage. It is these people that allow us to provide superior service to our ever expanding customer base.

Our designs are efficient and effective

Our disciplined design process ensures each cleanroom meets the exact customer requirements in a cost efficient manner.

Our construction process is of superior quality

Our installation specialists take personal pride in every cleanroom they build. Our process has resulted in superior customer satisfaction. All cleanrooms are designed and warranted by Angstrom Technology.
